Quality Policy

Our aim is to serve **our customers in the best possible way**, to develop reliable products in the shortest time possible and to deliver high-quality, cost-effective devices on a long-term basis.

We focus on what the customer needs – products he can use –

**We are the customers' partner
Their success is our success**

Our product design is characterised by **problem free producibility and quality assurance**.
The overall development and production and production costs are our yard stick for a low cost solution.

Using modern production equipment means we develop and manufacture products
with high quality and reliability.

Qualified and motivated employees determine the quality of our products and services.

Three important factors for the lasting success of the company are:

-> 1. Delivery

On-time delivery of innovative products makes us a reliable and trustworthy partner for our customers.

-> 2. Quality

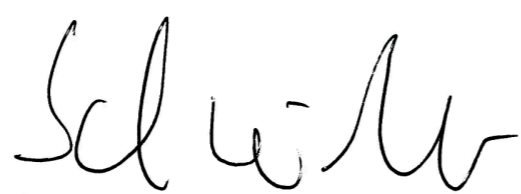

High quality and product reliability combined with continuous improvement
guarantee that we have the competitive edge.

-> 3. Costs

Competitive costs ensure our financial success.
