Product Catalog 2021/2022
Driving future mobility

Elmos ICs bring innovation into the customer’s system. Innovation Matters - this is our claim. We are one of the world’s most experienced semiconductor companies for the automotive industry. Our components communicate, measure, regulate and control safety, comfort, powertrain and network functions. For over 35 years, Elmos has been bringing new functions to life and making mobility worldwide safer, more comfortable and more energy efficient. With our solutions we are already the worldwide #1 in applications with great future potential, such as ultrasonic distance measurement, ambient light and intuitive HMI.

Elmos ICs serve the following global megatrends:
- Autonomous driving
- Electromobility/CO₂ reduction
- Safety, connectivity and comfort

With locations all over the world, we are represented in all key markets and always close to the customer. Our business model encompasses the entire process of a semiconductor: innovative teams create ideas and develop, produce and market the electronic components that make the difference.

For driving future mobility, we provide our customers
- Highly specialised research and development teams
- International customer support
- Worldwide production and distribution network

Made for you: Perfectly fitting ICs

Next to a broad range of ASSPs (Application Specific Standard Product) Elmos offers ASICs (Application Specific Integrated Circuit), that are specifically designed to the customer’s needs. The advantage of an ASIC: The special chip is tailor-made for use in the customer application and its individual design stays protected.

Best possible system integration, which means creating a higher functionality whilst simultaneously reducing the complexity at system level, is the target of the work. System knowledge combined with expertise and the optimal choice of possible integration strategies are prerequisites for success.

Our design teams are experts in the following application fields:
- **Sensor ICs**
  - Ultrasonic Distance, Sensor Signal Processor, Optical IR, Smoke Detector, Passive Infrared
- **Motor Control ICs**
  - Stepper Motor, Brushless DC, DC Motor
- **Interface ICs**
  - PSIS, LIN/CAN, KNX/EIB
- **Power Management ICs**
  - LED Driver, DC/DC Converter, Low Dropout (LD0) Regulator
- Other applications requiring a smart mixed-signal semiconductor solution.

Regardless of which solution you prefer, may it be a standard ASSP or a customized ASIC, Elmos always offers you the perfectly fitting semiconductor for your application.

2nd Gen. Ultrasonic Transducer Driver and Signal Processor | E524.08/09

Key Features
- Drives ultrasonic transducer via center-tapped transformer
- Excellent short & long range performance due to:
  - Wide signal gain range / Sensitivity time control / Static and automatic thresholds / Near-field threshold / Echo peak detection / Fast time constant algorithm
- Advanced IO protocol with configurable measurement profiles
- IC and transducer diagnosis information
- E524.08: 2-wire Interface
- E524.09: 3-wire Interface

Board
- Order No. see page 28

Applications
- Ultrasonic park assist (USPA/PDS/UPA)
  - Automatic parking (SPAS/PA)
  - Advanced driver assistance systems (ADAS)
  - Industrial distance measurement

Package
- QFN20L4

Application Diagram

---

High Voltage Direct Drive Ultrasonic Sensor IC | E524.32/33/34/35

Key Features
- Supports directly driven transducers
- Best measurement performance due to:
  - Smart damping algorithm / Two static and one automatic thresholds / Near field detection / Noise suppression
  - High robustness and diagnostics
  - Transducer diagnosis information / Temperature sensor
  - Advanced IO protocol with configurable measurement profiles
  - E524.32: 2-wire Interface | E524.33: 3-wire Interface | E524.34: 3-wire Interface 3.3V | E524.35: 3-wire Interface 5.0V

Board
- Order No. see page 28

Applications
- Ultrasonic park assist (USPA/PDS/UPA)
  - Automatic parking (SPAS/PA)
  - Industrial distance measurement

Package
- QFN20L4

Application Diagram
**LIN Smart Ultrasonic Parking Assist (Flash/ROM) | E524.14/24**

**Key Features**
- Drives ultrasonic transducer via center-tapped transformer
- Good measurement performance due to flexible software
- IC and transducer diagnosis information
- Embedded 8bit microcontroller with 8kByte Flash or ROM / 512Byte SRAM / 128Byte EEPROM
- LIN 2.2 Interface with slave node position detection (SNPD) and alternative pin-coding capabilities
- E524.14: User programmable Flash memory
- E524.24: Ready-to-use and flexible standard software (ROM)

**Board**
- Order No. see page 28

**Applications**
- Ultrasonic park assist (USPA/PDS/UPA)
  - Automatic parking (SPAS/APA)
  - Advanced driver assistance systems (ADAS)
  - Distance and level metering

**Packages**
- QFN20L5

**Application Diagram**

---

**Direct Drive Smart LIN Ultrasonic Sensor IC | E524.16**

**Key Features**
- Supports directly driven transducers
- Best measurement performance due to:
  - Static and automatic thresholds / Near-field detection / Noise suppression
- IC and transducer diagnosis information
- Embedded 8bit microcontroller with 16kByte OTP / 1024Byte SRAM / 256Byte EEPROM
- LIN 2.2 Interface with slave node position detection (SNPD)
- 4 High-voltage GPIOs for ECU-less parking systems

**Board**
- Order No. see page 28

**Applications**
- Ultrasonic park assist (USPA/PDS/UPA)
- ECU-less low cost systems
  - Industrial distance measurement

**Packages**
- QFN20L5

**Application Diagram**

---
Smart Ultrasonic Sensor IC with DSI Interface | E524.17

**Key Features**
- Outstanding performance
  - Advanced analog & digital signal processing
  - Ultrasound signal coding / Adaptive thresholds
- High robustness and good diagnostics
  - Ringing time and ringing frequency measurement
  - Self-test capabilities / Impedance measurement
- Flexible high-speed DSI3 communication interface
- ISO26262 with safety requirements rated up to ASIL B
- Arm® Cortex®-M0 with 32kB OTP | 4kB SRAM | 256 Byte EEPROM

**Applications**
- Ultrasonic park assist (USPA/PDS/UPA)
  - Automatic parking (SPAS/APA)
  - Advanced driver assistance systems (ADAS)

**Packages**
- QFN20L5

**Application Diagram**

---

Dual Automotive DSI3 Master Transceiver | E521.42

**Key Features**
- Suitable for fast data acquisition of sensors in signal function class
- Supports:
  - Point-to-point / Daisy chain bus / Parallel bus
- Versatile in-circuit configuration:
  - up to 15 DSI3-slaves
  - up to 16 packets per frame
  - 2 – 63 bytes of average payload data per packet
- ISO26262 with safety requirements rated up to ASIL B

**Applications**
- Ultra sonic parking assistant system
- DSI3 bus networks

**Packages**
- QFN20L4

**Application Diagram**

---
Sensors - Ultrasonic Product Portfolio

- **IO pt-to-pt Interface**
  - Proprietary (1 level) interface
  - Most signal evaluation in Park ECU

- **LIN BUS (or pt-to-pt) Interface**
  - LIN Bus System with less wiring
  - Signal pre-conditioning in sensor
  - Potentially without Park ECU or ECU less

- **DSI3 BUS (or pt-to-pt) Interface**
  - High bandwidth (up to 444kbit/s)
  - Low latency time for fast system reaction
  - Direct integration into ADAS systems

**Sensor-IC**
- Transformer Drive 2nd Gen. with advanced IO Interface (10cm – 600cm)
- Smart Transformer Drive 1st Gen. with LIN Interface and 8bit Controller (Flash and ROM versions) (15cm – 500cm)
- Smart Transformer Drive 1st Gen. with DSI3 Interface and 32bit µC ISO26262-ASIL B (10cm – 600cm)

**Sensor-IC**
- Direct Drive 2nd Gen. with advanced IO Interface (10cm – 400cm)
- Smart Direct Drive 1st Gen. with LIN Interface and 8bit Controller (10cm – 300cm)

**Master-IC**
- 2ch DSI3 Transceiver for DSI3 Bus Systems ISO26262-ASIL B
## Sensors - SSP: Sensor Signal Processor for Resistive Bridges

<table>

| E520.42 Automotive SSP with Analog or Sent Output | 5V ±0.5V | 5V Ratiometric Voltage SENT interface | Sensor Sensitivity \(0.8\text{mV/V to 50mV/V}\) | QFN20L4 Bare-Die | - Automotive protection +40/-28V 
- Very low noise front-end 
- Trimmable input low-pass filter 
- Comprehensive self diagnostics 
- SENT interface (SAE J2716, Jan 2010) |
| E520.47 Dual-Bridge Sensor Signal Processor with SENT Interface | 5V ±0.25V | SENT or I\textsuperscript{2}C | Sensor Sensitivity \(3\text{mV/V to 56mV/V}\) | QFN20L4 Bare-Die | - Automotive protection +35/-18V 
- Two fully redundant sensor bridge inputs 
- ISO26262 development for ASIL C support 
- Configurable SENT interface 
- AEC-Q-100 qualified |
| E703.11 Sensor Signal Processor for High Precision Applications | 2.7V to 5.5V | SPI or I\textsuperscript{2}C with CRC, Analog voltage, PWM or FM, End of Conversion/Alarm | Sensor Sensitivity \(2\text{mV/V to 88mV/V}\) | DFN14_3x4 Bare-Die | - Developed for Industrial Applications 
- Precision front end with two 16-bit ADC’s 
- Configurable sample rate (2.50kS/s) and low pass filter (10Hz, 8kHz) 
- 3\textsuperscript{rd} order polynomial sensor correction 
- Sleep mode available (I<20\text{µA}) |
| E703.21 Sensor Signal Processor for Industrial Pressure Transmitter | 4.75V to 32V | 4..20mA Current Loop 0..5V/10V Absolute Voltage 5V Ratiometric Voltage | Sensor Sensitivity \(2\text{mV/V to 88mV/V}\) | DFN14_3x4 | - Developed for Industrial Applications 
- Precision front end with two 16-bit ADC’s 
- Sensor Calibration via Output Pins 
- Precise current sense shunt 
- Integrated voltage regulator |
Automotive SSP with Analog or Sent Output | E520.42

**Key Features**
- Very low noise front-end amplifier and ADC allows SNR > 70dB for inputs down to 1mV/Fs
- PGA configurable to 50mV/Fs and adjustable offset of ±150% Fs
- Digital compensation of offset- and gain-drift and non-linearity up to 3rd order
- Analog voltage or digital SENT output (SAE J2716, JAN 2010)
- Supply 5.0 ± 0.5V, over-voltage a. reverse polarity protection (28V)
- Single-wire programming interface

**Board**
- Order No. see page 28

**Applications**
- Automotive sensor applications
- Conditioning of resistive bridge sensors

**Packages**
- QFN20L4
- Bare-Die

**Application Diagram**

---

Dual-Bridge Sensor Signal Processor with SENT Interface | E520.47

**Key Features**
- Supply and output protection: -18/+35 V
- Simultaneous signal processing for two sensors
- Fully digital calibration; no external trim components
- 10-step coarse gain trimming
- Low noise input with 15-bit ADC
- Configurable digital low-pass: 13Hz ... 1.1kHz
- Additional NTC channel with on-chip linearization
- ISO26262 development with safety requirements rated up to ASIL C

**Board**
- Order No. see page 28

**Applications**
- Automotive sensor applications
- Functional Safety Sensors, e.g. braking systems
- Conditioning of resistive bridge sensors

**Packages**
- QFN20L4
- Bare-Die

**Application Diagram**

---
Sensor Signal Processor for High Precision Applications | E703.11

Key Features
- High precision frontend
- PGA configurable to 2 · 88mV/V FS, offset adjustable to ±300% FS
- Output signal bandwidth widely configurable: (10Hz .. 8kHz), accuracy (10 .. 15 ENOB) and sample rate (2 .. 50kS/s)
- Ultra low latency: output update rate 2 .. 50kS/s, DSP time<25µs
- 6th order polynomial sensor correction (16 coefficients)
- Temperature sources: chip, bridge and external (diode, NTC)

Applications
- High precision industrial pressure sensors
- Ultra low pressure OEM modules
- Industrial products using resistive sensor bridges

Packages
- Order No. see page 28

Application Diagram

Sensor Signal Processor for Industrial Pressure Transmitter | E703.21

Key Features
- Pressure signal bandwidth, accuracy and output update rate widely configurable
- Two fully differential 16 bit ADCs for pressure and temperature signal acquisition
- Configurable 4 .. 20mA / absolute 0 .. 10V / ratometric 0 .. 5 V analog output with 16 bit DAC
- Ultra low latency, limited only by -3dB signal bandwidth
- Traceability by unique 48bit serial number

Applications
- Industrial pressure transmitters
- Resistive MEMS & thick/thin film sensors with and without laser trimmed offset (offset up to 36 .. 114 mV/V

Packages
- Order No. see page 28

### Barometric Air Pressure Sensor | E524.71/72/73

**Key Features**
- Fully integrated pressure sensor
- Full thermal compensation to accuracy ±1.0 kPa
- Two 16-bit ADCs for acquisition of pressure and temperature inputs; pressure acquired at 20kS/s
- Diagnosis of sensor, sensor supply and wiring, and NVM check-sum supervision at power-on

**Applications**
- Automotive applications
- Industrial applications
- Medical applications

**Application Diagram**

### Integrated Absolute Pressure Sensor with Analog Output | E524.75

**Key Features**
- Fully integrated and compensated pressure sensor
- Different measurement ranges of absolute pressure available
- 10 to 115kPa with clipping of output
- Full thermal compensation to accuracy ±2 %FS
- Ratiometric analog output
- Wide linear range of analog output
- Diagnosis of sensor, sensor supply wiring, and NVM CRC check at power-on

**Applications**
- Automotive Pressure Sensor
- Manifold Absolute Pressure Sensing

**Packages**
- SOIC8

**Application Diagram**

Rain and Light Sensor | E527.04

Key Features
- Front end Optical Rain Sensor signal processor
- Four input channels for ambient light measurements
- High sensitivity, no total reflection needed
- Very high robustness against ambient influences like sun light, aging and dirt
- Two embedded LED drivers, driving up to 40mA
- Provides a rain drop signal via the WS pin - SPI interface
- Temperature sensor
- Extensive diagnosis during operation

Applications
- Optical Rain Sensor (wiping systems)
  - Windshield, Security Cameras
- Ambient Light Sensor (measurement) to control
  - Headlight, Head-up Displays, Air Conditioning
- Pollution Sensor

Application Diagram

HALIOS® Controller for Proximity and Gesture Recognition | E909.21

Key Features
- Patented HALIOS® control loop
- 4 LED sending channels, 100mA per channel
- 2 receiving channels, 1 compensator channel
- Scalable HALIOS® frequency up to 1MHz
- SSI serial sensor interface
- 16 bit Harvard Architecture H430 CPU
- 32kB Flash, 4kB SRAM and 8kB SysROM
- Temperature range -40°C to +105°C
- Automotive qualified (AEC-Q100)

Applications
- Proximity a. gesture recognition for automotive touch displays
- Driver and passenger detection
- Wake-up function for displays
- Touchless control in harsh environments (e.g. explosion protected areas)

Application Diagram
HALIOS® Signal Conditioner f. Proximity a. Gesture Recognition  | E909.22

**Key Features**
- Patented HALIOS® control loop
- 4 LED sending channels, 100mA per channel
- 2 receiving channels
- 1 compensator channel
- Scalable HALIOS® frequency up to 1MHz
- SSI serial sensor interface
- Ambient light immunity up to 200,000 lux
- Temperature range -40°C to +105°C
- Automotive qualified (AEC-Q100)

**Applications**
- Proximity a. gesture recognition for automotive touch displays
- Driver and passenger detection
- Wake-up function for displays
- Touchless control in harsh environments (e.g. explosion protected areas)

**Application Diagram**

HALIOS® Low Power Signal Conditioner  | E909.23

**Key Features**
- Patented HALIOS® control loop
- 4 LED sending channels, 100mA per channel
- 1 receiving channels
- 1 compensator channel
- I²C interface
- Ambient light immunity up to 200,000 lux
- Temperature range -40°C to +105°C
- Automotive qualified (AEC-Q100)

**Applications**
- Wide Sensor Bars
- Door Handles
- Control Panels
- Focal point of Interest

**Application Diagram**
**HALIOS® Gesture Switch | E527.16**

**Key Features**
- Ready-to-use functions
- Implemented gesture recognition
- Detection approx. 25cm
- Direct light control possible
- PWM-Output (125 Hz, 8 Bit)
- Reference schematics and reference layout are available

**Applications**
- Innovative motion controlled light
- Optical push buttons and controls
- Wake-up function for saving energy
- Pre-selection to simplify menu structures

**Board**
- Order No. see page 29

**Packages**
- QFN32L5

- Dedicated for distance measurements
- Ambient light suppression
- SPI Interface
3D Image Sensor | E527.31

Key Features
- Optical sensor for gesture and object recognition
- 32 x 32 active pixels
- 3D information enables object classification in real time
- Ambient light suppression by 850nm bandpass filter and background light subtraction
- Very low power consumption
- Integrated temperature sensor for temperature compensation
- Automotive qualified (AEC-Q100)

Applications
- Finger gesture detection in HMI applications
- Passenger monitoring
- Easy open liftgate
- Contactless door access

Board
- Order No. see page 29

Packages
- QFN44L7

| **E910.97** Pyroelectric SSC with Relay Output | 2.7V to 3.6V | 15µA | PIR Signal, digital | Wafer Bare-Die | - Outputs for motion detect  
- Insensitive to RF interference  
- Inputs for sensitivity and on time |
| **E931.97** Pyroelectric SSC with Relay/LED Output | 2.7V to 3.6V | 25µA | Motion DETECT, Threshold | SOIC14N TSSOP14 Wafer Bare-Die | - Outputs for relay and LED  
- Insensitive to RF interference  
- Instanteous settling after power up |
| **E931.98** Pyroelectric SSC with Zero Crossing Detection | 2.7V to 3.6V | 18µA | Motion DETECT, Threshold | SOIC14N TSSOP14 | - Insensitive to RF interference  
- Instanteous settling after power up  
- Adaptive mains zero cross switching |
Pyroelectric SSP | E931.06

Key Features
- Direct connection to PIR sensor elements
- Temperature measurement
- Differential PIR sensor input
- Low Current Consumption
- Excellent power supply rejection
- High dynamic range

Applications
- Integration with PIR sensor elements
- High end PIR systems
- Building management

Application Diagram

---

Dual Channel Pyroelectric SSP | E931.62

Key Features
- Direct connection to PIR sensor elements
- Temperature measurement
- Differential PIR inputs
- Digital Signal Processing (DSP)
- Single wire serial interface (DOCI™)
- Operating voltage down to 2.7V
- Low current consumption
- High dynamic range
- High supply rejection

Applications
- Integration with PIR sensor elements (hybrid modules)
- Gas sensors
- High end PIR systems

Application Diagram
Low Power Pyroelectric SSP | E931.96

Key Features
- Programmable detection criteria and operating modes
- Digital signal processing
- On chip supply regulator for conventional PIR detectors
- Ultra low power consumption
- Differential PIR sensor input
- Excellent power supply rejection
- Insensitive to RF interference
- Instantaneous settling after power up

Board
- Order No. see page 29

Applications
- Wireless intruder detectors
- Battery powered door chimes
- Emergency lighting
- Motion and presence detection

Application Diagram

Pyroelectric SSC with Relay Output | E910.97

Key Features
- Digital Signal Processing
- On chip shunt regulator
- Low Power Consumption
- Differential PIR sensor input
- Excellent power supply rejection
- Inputs for sensitivity and on time

Applications
- PIR motion detection
- Intruder detection
- Occupancy detection
- Motion sensor lights

Packages
- SOIC8
- Wafer
- Bare-Die

Application Diagram
Pyroelectric SSC with Relay/LED Output | E931.97

Key Features
- Digital Signal Processing
- On chip shunt regulator
- Low Power Consumption
- Differential PIR sensor input
- Excellent power supply rejection
- Outputs for relay and LED

Applications
- PIR motion detection
- Intruder detection
- Occupancy detection
- Motion sensor lights

Application Diagram

Pyroelectric SSC with Zero Crossing Detection | E931.98

Key Features
- One pulse trigger
- Adaptive zero crossing switching
- On chip shunt regulator
- Low power consumption
- Differential PIR sensor input
- Excellent power supply rejection

Applications
- PIR motion detection
- Intruder detection
- Occupancy detection
- Motion sensor lights

</tbody>
</table>
**Power Stepper Controller with Stall Detection | E523.30/31**

**Key Features**
- Drives a bipolar stepper motor
- Sensorless "stall detection"
- I - Coil current up to 2 x 800mA (prog. chopper)
- 5.5V - 20V supply voltage (load dump 42V)
- Sleep mode current typically 30µA
- Embedded 8bit µC 256 Byte RAM, 8k Flash, 64 Byte E²PROM
- Versions: LIN/PWM Interface, optional LIN Auto-Addressing

**Applications**
- Stepper or DC motor actuators
- Grill-Shutter
- Head-Light adjust
- Water valve

**Application Diagram**

---

**SPI Stepper Driver | E523.39**

**Key Features**
- 5V, 28V motor run; VBAT,max 40V (42V for 500ms)
- "Stop/Start" & "cold crank" compliant
- Stall-Detection
- Fail-Current-Detection
- Adaptive-Holding and Running-Torque supported
- Custom Current Waveform: increase of speed and peak power at high temperatures or low VBAT
- AEC-Q 100 Grade 0

**Applications**
- Automotive, High-Temperature, Industrial
- 4-phase positioning actuators, fans, pumps

**Application Diagram**

---

**Board**
- Order No. see page 46

**Packages**
- QFN32L6

---

**Board**

**Packages**
- QFN20L5
- QFN32L6
12/8x Low-Side Driver with Stall Detection | E520.01/02/03/08

**Key Features**
- 12 high current outputs (RDS_{on} typ. 1.5Ω / I_{max} = 350mA)
- Low standby current (typically <1µA)
- Serial interface (SPI) for direct µC interfacing
- Short circuit / Open load detection, diagnosis
- Stall detection for full-/half-step, wave drive
- Stall detection qualification service
- $T_{j,\text{peak}} = +150^\circ$C

**Board**
- Order No. see page 46

**Applications**
- Stepper motor driver with/without stall detection
- DC motor driver with PWM
- Relay driver with VBAT- automatically PWM
- LED driver with 3 logarithmic PWM sources

**Packages**
- E520.01/02 QFN32L5, SOIC28
- E520.03/08 QFN32L5, QFN20L5, SOIC20

Field-Oriented BLDC Motor Controller with 16 Bit CPU | E523.06

**Key Features**
- IC supply voltage range 7 to 28V (extended 5V to 42V)
- CPU 16 bit, 24 - 48MHz for application tasks
- 32 kByte Flash, ECC protected
- 24 kByte Masked ROM
- 4 kByte SRAM, parity protected
- Typical deep-sleep mode current 20μA
- 2nd window watchdog and two independent clocks
- LIN 2.x (1.3, SAE-J2602 comp.) or PWM bidirectional
- Fast OpAmp for foot current measurement

**Board**
- Order No. see page 46

**Applications**
- BLDC(EC) motor control, multiple DC motor control
- Cooling fans, HVAC fans, positioning systems
- Fuel, hydraulic, oil and water pumps
- Position system

**Packages**
- QFN48L7
- LQFP48L7EP

---

72V Brushless Motor Gate Driver with 16bit CPU | E523.52

**Key Features**
- Voltage range 12V to 72V (7V to 76V peak)
- CPU 16 bit, 24 - 48MHz for application tasks
- 32kByte Flash, 16kByte MaskROM, 4kByte SRAM
- 10 bit 1 Msample SAR ADC
- 4x 16 bit PWM generation (edge/center aligned)
- Adjustable window watchdog (independent clock)
- 6x 200mA gate drivers with programmable dead time and protection features
- Fast OpAmp for foot current measurement

**Board**
- Order No. see page 47

**Applications**
- BLDC(EC) motors in industrial 24V to 60V applications
- Commercial vehicles
- Fuel, hydraulic, oil, water and urea pumps
- Cooling fans, HVAC fans, positioning systems

**Packages**
- QFN36L7

---

*SoC / *Plug & Play
Fully Integrated 3 Phase Motor Controller | E523.42

Key Features
- Voltage range 7V to 28V (6V to 42V peak)
- Monitor and diagnosis features
- LIN 2.x (1.3, SAE-J2602 comp.)
- Area and power optimized 32bit ARM® Cortex®-M0
  - 32 KByte OTP, 256 Byte customer EEPROM
  - 24 KByte SysROM(3 for LIN protocol and bootloader)
- Smart supply block for 12V automotive boardnet
  - Configurable low supply voltage (<7V) operation
  - 30μA sleep mode current (25°C typ.)

Applications
- Three motor(BLDC), a three phase stepper motor or two conventional DC motors
- Sensorless motion detection

Board
- Order No. see page 47

BLDC Motor Driver (LIN/PWM Interface) | E523.01/11

Key Features
- Gate drive circuit for B6-NMOS bridge
- Voltage range 7V to 28V (5V to 42V peak)
- LIN 2.x (1.3, SAE-J2602 comp.) or PWM bidirectional
- Software update via LIN high speed mode
- Precise, dynamical dead-time generation
- Voltage regulator for µC 3.3V or 5V, up to 70mA direct load
- Separate short-circuit protection for each MOS-FET
- Configurable over-current protection

Applications
- BLDC(EC) motor control, multiple DC motor control
- Fuel, Hydraulic, Oil and Water pump
- Cooling fan, HVAC fan, positioning systems
- Turbo charger adjustment
- BLDC actuators and servo systems

Board
- Order No. see page 47

BLDC-Motor Driver with Cold-Crank Capability | E523.10

**Key Features**
- Gate drive circuit for B6-NMOS bridge
- Voltage range 4.5V to 28V (42V peak) for start-stop systems
- Sleep mode current 20µA typically
- Microcontroller supply 3.3V or 5V
- Adjustable watchdog and reset generation
- Motor current measurement amplifier
- Over current switch-off (dynamical change)
- FET short circuit protections (dynamical change)
- Configurable voltage monitoring

**Applications**
- BLDC (EC) motor control, multiple DC motor control
- Fuel, hydraulic, oil and water pumps
- Cooling fans, HVAC fans, positioning systems
- Turbo charger adjustment

**Packages**
- QFN44L7

**Order No.** see page 47

---

72V Brushless Motor Gate Driver | E523.50

**Key Features**
- Gate drive circuit for B6-NMOS bridge
- Voltage range 12V to 72V (7V to 76V peak)
- DC/DC converter for 11V/100mA
- µC supply 3.3V up to 20mA direct load, higher loads with external boost transistor possible
- 200mA gate drivers including protection features
- Integrated back EMF detection
- $T_{j,\text{peak}} = +150°C$

**Applications**
- BLDC (EC) motors in industrial 24V to 60V applications
- Commercial vehicles
- Fuel, hydraulic, oil, water and urea pumps
- Cooling fans, HVAC fans, positioning systems

**Packages**
- QFN36L7

**Order No.** see page 47

*SBC
500mA BLDC Motor Controller | E523.81

Key Features
- IC for standalone PMSM applications
- Internal power bridge up to 500mA (rms)
- Selectable PWM speed and error interface or analog speed interface
- Tacho output
- Current controlled start up
- Integrated configurable error handling
- Stall detection
- Automatic restart and rotor delocking

Board
- Order No. see page 47

Applications
- Small PMSM / BLDC FANs
- Small PMSM / BLDC Pumps

Packages
- QFN20L5

DC Motor Driver with 16kB Flash | E523.26

Key Features
- Includes µC, memory, interfaces, high side gate driver, supply and measurement functions
- 8bit processor core, EL3.5, 512 Bytes RAM
- 16k Flash memory
- 16 words EEPROM Customer Data
- On-Chip ADC for measurement of motor current, supply voltage, temperature and up to three other analog voltages
- Gate driver for NMOS high side FET
- AEC-Q100 Qualified

Applications
- Control of brush DC motors of fans/blowers in automotive applications

Application Diagram

---

DC Motor LS FET Driver (LIN / PWM Interface) | E523.03/04/13/14

Key Features
- Voltage range 7 to 28V (5V to 42V peak)
- LIN 2 x (1.3, SAE-J2602 comp.) or PWM bidirectional
- Deep sleep mode current ≤ 30µA
- Voltage Regulator for ext.µC: 3.3V/5V, I_{MAX}=30mA
- Window-watchdog, dynamical change via SPI
- Amplifier for low side motor current measurement
- Over-current switch-off, dynamical change via SPI
- Monitoring battery voltage, gate supply, temperature

Applications
- DC Wiper
- DC HVAC fan, engine cooling fan
- DC fuel pump, hydraulic pump, oil pump
- Multiple DC motor control
- Without external FETs: direct driving of small loads

Application Diagram
Field-Oriented DC Motor Controller with 16 Bit CPU | E523.06

Key Features
- Gate drive circuit for B6-NMOS bridge
- IC supply voltage range 7 to 28V (extended 5V to 42V)
- CPU 16 bit, 24 - 48MHz for application tasks
- 32 kbyte Flash, ECC protected
- 24 kbyte Masked ROM
- 4 kbyte SRAM, parity protected
- Typical deep-sleep mode current 20µA
- LIN2.x, LIN1.3 or bidirectional PWM Interface

Applications
- EC, BLDC, PMSM motors 50W to ~1500W
- Cooling fans, HVAC fans, positioning systems
- Fuel, hydraulic, oil and water pumps

Package
- QFN48L7
- LQFP48L7EP

Application Diagram

2x 800mA DC Motor 2x Full Bridge Controller (LIN / PWM Interface) | E523.30

Key Features
- Voltage range 7V to 20V (5.5V to 42V)
- LIN 2 x (1.3, SAE-J2602 comp.) or PWM bidirectional
- Drives 1 or 2 DC Motors
- 800mA (2 Motor Mode)
- Programmable chopper current
- Slave node position detection / auto-addressing
- 8bit CPU, 8k Flash, 64Byte E2PROM
- 3 GPIO pins and sensor supply

Applications
- Headlight adjust
- Grille shutter
- Water valves
- Multi purpose LIN slave

Package
- QFN32L6

Application Diagram
2x Full Bridge Driver (SPI Interface) | E523.39

**Key Features**
- 5V .. 28V motor run; VBAT,max 40V (42V for 500ms)
- "Stop/Start" & "cold crank" compliant
- Stall-Detection
- Fail-Current-Detection
- Adaptive-Holding and Running-Torque supported
- Custom Current Waveform: increase of speed and peak power at high temperatures or low VBAT
- AEC-Q 100 Grade 0

**Applications**
- Automotive, High-Temperature, Industrial
- 4-phase positioning actuators, fans, pumps

**Board**
- Order No. see page 46

**Packages**
- QFN20L5
- QFN32L6

---

6x Half-Bridge DC Motor with Sensorless Positioning | E910.72

**Key Features**
- Operating supply voltage range 6V to 19V
- 6 half bridges to drive 3, 4, or 5 DC motors
- $R_{DRAIN}$ of one half bridge typ. 1.25Ω
- Independent pulse detectors for three motors
- 2 different pulse detectors covering the complete speed range
- Adjustable parameters to drive a high number of different motor types
- Diagnostic data via SPI

**Applications**
- Automotive HVAC flap
- DC motor servo systems

**Board**
- Order No. see page 46

**Packages**
- QFN32L5

**LIN Controller with Position Detection | E521.31**

**Key Features**
- Transceiver compliant with LIN 2.1, LIN 2.2 and SAE-J2602
- Linear voltage regulator with 5V, 100mA
- State of the art 16bit µC
- Integrated 32kbyte Flash (Flexible EEPROM emulation by SW)
- 4x PWM driven High Side drivers with 5V and up to 50mA each
- µC window watchdog
- ADC 12bit accuracy

**Applications**
- Interior light modules

**Board**
- Order No. see page 60

**Packages**
- QFN32L5

**Application Diagram**

---

**RGB LIN Controller with Current Source | E521.36**

**Key Features**
- Input voltage range 5V to 28V
- Integrated 16 bit microcontroller
- 32kByte OTP
- 128Byte customer usable non-volatile memory
- 1.25kByte RAM 16kByte SysROM containing standard LIN routines and bootloader
- 4 PWM generators with 48MHz and 16bit resolution
- 2 Timers with 16bit resolution
- 3 LED drivers with currents up to 40mA and fast slopes

**Applications**
- Interior light modules
- Ambient lighting

**Board**
- Order No. see page 60

**Packages**
- SOIC8-EP

**Application Diagram**
Linear LED Controller (High Current Version 48 to 151mA) | E522.80-83

Key Features
- Three independent linear current drivers (3*150mA)
- Operating input voltage range 5V to 25V, max. 40V
- Advanced diagnostic features
  - Open / short detection
  - Diagnostic “RUN” bus to link multiple ICs
- Different start-up voltages for open diagnostics can be chosen: VS=7.5V, 9V, 10V and 15V
- “Single Lamp” mode disables all LEDs in case of a failure
- Automotive qualified (AEC-Q100)

Applications
- Automotive LED lighting
- Rear lighting
- Turn indicator driver
- Low current interior lighting
- Industrial LED applications or simple RGB drivers

Application Diagram

Linear LED Controller (Low Current Version 20 to 60mA) | E522.84-87

Key Features
- Three integrated linear current drivers (3*60mA)
- Operating input voltage range 5V to 25V, max. 40V
- Advanced diagnostic features
  - Open / short detection
  - Diagnostic “RUN” bus to link multiple ICs
- Different start-up voltages for open diagnostics can be chosen: VS=7.5V, 9V, 10V and 15V
- “Single Lamp” mode disables all LEDs in case of a failure
- Automotive qualified (AEC-Q100)

Applications
- Automotive LED Lighting, Rear Lighting
- Turn Indicator Driver
- Low Current Interior Lighting
- Industrial LED Applications or simple RGB Drivers

Application Diagram
**Triple Linear LED Controller (14 to 55mA) | E522.90-93**

**Key Features**
- Operating input voltage range 5V to 25V, max. 40V
- Three independent high-side Current Sources (3*55mA)
- Parallel Operation for up to 165mA
- Low Power Standby / Sleep Mode
- Thermal Management Option per Channel
- External Reference Voltage / Derating Supported
- Automotive qualified (AEC-Q100)

**Applications**
- Automotive LED lighting application
  - Rear Lamp (e.g. Brake Lamp, Reverse Light, Back Up Light, Rear Fog Light, Rear Light Module)
  - Driving of OLEDs in cathode to GND topology

**Application Diagram**

---

**8 Channel LED Driver with I²C Interface | E522.46**

**Key Features**
- Input voltage range 3.3V to 32V (max. 42V)
- 8-channel I²C programmable linear high side driver
- Parallel output operation for up to 200mA
- 8Bit adjustable LED master current 1mA to 26.5mA
- 8Bit PWM based LED luminous intensity level for LED binning calibration
- Global PWM and configurable analog dimming
- Configuration storable in integrated EEPROM
- Automotive qualified (AEC-Q100)

**Applications**
- Automotive LED lighting
  - Multi-channel panel applications
  - Low current interior lighting
  - Dynamic rear light functions

**Application Diagram**

---

**Board**

- Order No. see page 61

---

**Packages**

- SOIC16N-EP

---

---

**Packages**

- DFN18L5040

---

**Order No. see page 60**
16 Channel LED Driver with I²C Interface | E522.48

Key Features
- Fast I²C bus interface for dynamic LED control
- 16 PWM generators with 10bit resolution
- 16 programmable LED drivers up to 100mA
- PWMIN interface with fallback data
- 10bit ADC for LED open, short and system diagnosis
- LED channel individual bin class brightness correction
- Single lamp mode behaviour option
- Developed according ISO26262 up to ASIL B

Board
- Order No. see page 60

Applications
- Automotive interior and exterior light systems
- General LED Applications
- High speed LED light animations

Packages
- QFN32L6

Application Diagram

16 Channel LED Driver with Diff. Bus Interface | E522.49

Key Features
- Fast differential bus interface for dynamic LED control
- 16 PWM generators with 10bit resolution
- 16 programmable LED drivers up to 100mA
- PWMIN interface with fallback data
- 10bit ADC for LED open, short and system diagnosis
- LED channel individual bin class brightness correction
- Single lamp mode behaviour option
- Developed according ISO26262 up to ASIL B

Board
- Order No. see page 60

Applications
- Automotive interior and exterior light systems
- General LED Applications
- High speed LED light animations

Packages
- QFN32L6

Application Diagram
1 Channel Switched-Mode Constant Current LED Controller | E522.31/33

**Key Features**
- 5.0V to 55V input, up to 80V boosted output voltage
- Boost-to-GND, Boost-to-Battery and SEPIC topologies supported
- Constant current regulation
- Analog dimming and digital dimming 3000:1 at 100Hz PWM
- Advanced In-System diagnostics (e.g. GND loss, output overload and highside feedback diagnostics)
- Very low sleep mode currents of typ. 8μA
- Automotive qualified (AEC-Q100)

**Applications**
- Automotive interior and exterior light systems
- General LED Applications
- High speed LED light animations

**Board**
- Order No. see page 60

**Packages**
- QFN32L5

**Application Diagram**

2 Channel Switched-Mode Constant Current LED Controller | E522.32/34

**Key Features**
- 5.0V to 55V input, up to 80V boosted output voltage
- Boost-to-GND, Boost-to-Battery and SEPIC topologies supported
- Constant current regulation
- Analog dimming and digital dimming 3000:1 at 100Hz PWM
- Advanced In-System diagnostics (e.g. GND loss, output overload and highside feedback diagnostics)
- Very low sleep mode currents of typ. 8μA
- Pin compatible to E522.31/33
- Automotive qualified (AEC-Q100)

**Applications**
- Automotive LED lighting applications
- Exterior LED lighting
- TFT backlighting
- General current driven applications

**Board**
- Order No. see page 60

**Packages**
- QFN32L5

**Application Diagram**

Low Quiescent Current PFM Step Down Converters | E522.01-06

Key Features
- Voltage range 4.3V to 40V
- PFM operation up to 1.33MHz
- Up to >92% efficiency
- Very low 8µA sleep mode current
- Ultra low 12µA standby current
- 100% duty cycle capability
- Junction temperature range -40°C to +150°C
- Automotive qualified (AEC-Q100)

Board
- Order No. see page 61

Applications
- Supply of
  - Microcontroller systems
  - Automotive telematics, dashboards
  - Partial networking systems
  - Peripheral control systems

Packages
- QFN20L4
- TSSOP16

Application Diagram

Low Quiescent Current PFM Step Down Converters | E522.10

Key Features
- Voltage range 3.6V to 40V
- PFM operation up to 1.33MHz
- Up to >92% efficiency
- Very low 10µA sleep mode current
- Idle current 15µA
- 100% duty cycle capability
- Junction temperature range -40°C to +150°C

Dual LDO with Diagnosis | E522.40

Key Features
- Input voltage range from 4.5V to 25V
- Two accurate output voltages from 3.3V to V\text{BAT}
- Up to 200mA load current with integrated current limit
- Programmable overcurrent and open load detection error protection
- Open-drain error flag for interrupt generation
- 8bit ADC samples system voltages and current ranges
- Optional external NPN pre-regulator
- Programmable comparator for additional control functions

Applications
- Automotive antenna modules
- Navigation and radio units
- General voltage regulator applications

Application Diagram

Triple Antenna Supply | E522.44

Key Features
- Input voltage range from 4.5V to 40V
- Resistor programmable output voltage
- Output voltage range 3 to 40V
- Three channels with up to 350mA output current capability
- Parallel regulator operation
- Switch mode operation with current and voltage sensing
- Thermal protection and temperature monitoring
- Over current/open load protection

Applications
- Automotive Antenna Modules
- Navigation and Radio Units
- General Voltage Regulator Applications
- Sensors

2-/4-Channel Multi-Mode PSI5 Transceiver | E521.40/41

Key Features
- Provides two respective, four master channels compliant with PSI5 standard v1.3 and v2.1
- Support 125 Kbit/s, 189 Kbit/s, synchronous and asynchronous modes
- Internal sync-voltage generation
- Programmable bus-voltage 4.6V to 11V
- Automatic threshold adaptation to sensor quiescent current
- Reverse polarity protected bus outputs up to 40V

Applications
- Safety (airbag) control systems
- Powertrain control systems
- Vehicle dynamics control system

Application Diagram

Key Features
- Two respective, four independent operating channels
- Device parameters comply with PSI5-P10P-500/3L (PSI5 spec 1.3)
- Applicable for parallel and universal mode (standard) as well as daisy chain mode (increased)
- Channel output short circuit protected against 40V and GND

Applications
- Passenger restraint systems

**CAN-FD SBC with DC/DC and Highside Switch | E521.21/23**

**Key Features**
- Voltage regulator 3.3V/5V
- DC/DC buck converter up to 200mA
- HS-CAN-FD transceiver (ISO 11898-2:2016) up to 2 Mbit
- Charge pump for external active reverse polarity protection
- Sensor supply voltage regulator 5V/50mA
- Integrated high-side switch typ. 0.15Ω with current sense
- Gate control for external high-side driver (NMOS power FET)

**Applications**
- ECUs connected to the CAN bus
- Front light modules
- Body computer

**Packages**
- QFN32L5

*SoC System-on-a-Chip | with integrated microcontroller
LIN SBC with Voltage Regulator | E521.25

Key Features
- LIN transceiver, V 2.1, V2.2 SAE-J2602, ISO9141
- Operating range 5V 5V up to 28V
- Limited functional range 3.8V up to 40V
- Typ. 10µA sleep current consumption
- Very low BUS leakage current
- Reset generation
- µC window watchdog
- Internal 1:6 Voltage Divider for V_{bat} Sensing
- 3.3V (2%) in active mode, (5%) in standby mode

Applications
- Smart applications connected to the LIN bus

Packages
- QFN20L5

Application Diagram
LIN Controller with Position Detection | E521.31

Key Features
- Transceiver compliant with LIN 2.1, LIN 2.2 and SAE-J2602
- Linear voltage regulator with 5V, 100mA
- State of the art 16bit µC
- Integrated 32kbyte Flash (Flexible EEPROM emulation by SW)
- 4x PWM driven High Side drivers with 5V and up to 50mA each
- µC window watchdog
- ADC 12bit accuracy

Applications
- Interior light modules

RGB LIN Controller with Current Source | E521.36

Key Features
- Input voltage range 5V to 28V
- Integrated 16 bit microcontroller
- 32kByte OTP
- 128Byte customer usable non-volatile memory
- 1.25kByte RAM 16kByte SysROM containing standard LIN routines and boot loader
- 4 PWM generators with 48MHz and 16bit resolution
- 2 Timers with 16bit resolution
- 3 LED drivers with currents up to 40mA and fast slopes

Applications
- Interior light modules
- Ambient lighting

**KNX/EIB Transceiver | E981.03**

**Key Features**
- KNX/EIB transceiver, certified according to KNX TP1-256
- Analog mode supported
- Configurable bus current (maximum current and slew rate)
- Voltage regulators
  - 20V: current capability up to 20mA
  - 3.3V or 5V DC/DC converter: current capability up to 70mA
- UART host interface (data rate up to 115.2 Kbit/s)
- SPI for configuration (optional)

**Applications**
- Sensors, actuators, routers, gateways,
  - Bus-powered or externally supplied
- Security applications

**Board**
- Order No. see page 77

**Packages**
- QFN32L7

External mU

External mU
### Key Features

- Two squib current modes (LCM and HCM) selectable via SPI commands
- Simultaneously firing of 4 loops possible
- Squib channel diagnostics and monitoring
- Autarky voltage & squib supply voltage diagnostics
- Separate low side and high side driver control
- Serial interface (SPI synchronous communication) to μC (3.3V and 5V tolerant inputs)

### Applications

- Squib driver in a restraint diagnostic and control module (RDM)

### Packages

- QFN44L7

---

### Key Features

- Two squib current modes (LCM and HCM) selectable via SPI commands
- Simultaneously firing of 4 loops possible
- Squib channel diagnostics, monitoring and current counter
- Autarky voltage & squib supply voltage diagnostics
- Separate low side and high side driver control
- Serial interface (SPI synchronous communication) to μC (3.3V and 5V tolerant inputs)

### Applications

- Squib driver in a restraint diagnostic and control module (RDM)

### Packages

- QFN44L7

Glow Plug Control IC | E525.07

Key Features

- 4 gate drivers for external hi-side power-NMOS
- PWM controlled gate output with integrated charge pump
- Adjustable gate charge / discharge currents
- Gate sequencing for minimum current ripple
- MOS protection by gate-source voltage limitation
- Glow plug current sense with over-current shut-off
- Battery measurement, over-voltage and undervoltage, shut-down, charge pump monitoring

Applications

- Quick start Diesel engine controls for Euro 6
- Ceramic glow plugs
- Steel glow plugs
- For direct and indirect injection

Packages

- QFN32L6

*Plug & Play* Chip with defined functionality | no controller programming necessary

*SoC* System-on-a-Chip | with integrated microcontroller

*SBC* System-Basic Chip | with Voltage Regulator Reset, Watchdog, physical Interface

*Driver IC* Driver Chip without SBC or SoC features
12/8x Low-Side Relay Driver with Constant Holding Current | E520.02/08

**Key Features**
- 12 high current outputs (RDS$_{ON}$ typ. 1.5Ω / $I_{MAX} = 350mA$)
- Low standby current (typically <1µA)
- Serial interface (SPI) for direct µC interfacing
- Short circuit / Open load detection, diagnosis
- $T_{J, \text{peak}} = +150°C$

**Applications**
- Relay Driver with automatically $V_{BAT}$-dependent PWM duty cycle generation
- Low power dissipating relay boards

**Packages**
- QFN32L5
- QFN20L5
- SOIC20
- SOIC28

**Applications Diagram**

LIN2.x Relay Node SBC for 1 Relay | E523.03/04/13/14

**Key Features**
- Voltage range 7V to 28V (5V to 42V peak)
- Controlling 1 low side driven relay or 1 high side driven relay
- Relay pull-in and holding current can be controlled via PWM input
- Power supply 3.3V or 5V for external controller
- LIN2.x(1,3), SAE-J2602 interface or bidirectional PWM
- Several Diagnostic and protection functions
- Adjustable window watchdog
- $T_{J, \text{peak}} = +170°C$

**Applications**
- LIN2.x or LIN1.3 relay nodes

**Packages**
- QFN20L4
- QFN32L5 (with high voltage spacer)

**Applications Diagram**

*Driver IC

*SBC
LIN2.x Relay Node SBC for 6/5 relays | E523.01/11

Key Features
- Voltage range 7V to 28V (5V to 42V peak)
- Controls 6 relays, low- or high-side driven or 5 bistable relays
- Relay pull-in and holding current can be controlled via PWM input
- Power supply 3.3V or 5V for external controller
- LIN 2.x interface (1.3), SAE-J2602 or PWM bidirectional
- Several diagnostic and protection functions
- Adjustable window watchdog
- TJ peak = +170°C

Applications
- LIN2.x or LIN1.3 relay nodes

Packages
- QFN44L7
- QSOP44
- QFN48L7

Application Diagram

LIN2.x Relay Node SBC for 4/3 Relays | E523.02/12

Key Features
- Voltage range 7V to 28V (5V to 42V peak)
- Controls 4 relays, low- or high-side driven or 3 bistable relays
- Relay pull-in and holding current can be controlled via PWM input
- Power supply 3.3V or 5V for external controller
- LIN 2.x interface (1.3), SAE-J2602 or PWM bidirectional
- Several diagnostic and protection functions
- Adjustable window watchdog
- TJ peak = +170°C

Applications
- LIN2.x or LIN1.3 relay nodes

Packages
- QFN44L7
- QSOP44

Application Diagram
Free Programmable LIN2.x Relay Node for 6/5 relays | E523.06

Key Features
- Voltage range 7V to 28V (5V to 42V peak)
- Controls 6 relays high- or low-side driven or 5 bistable relays
- Relay pull-in and holding current can be controlled via PWM input
- LIN2.x(1.3)(SAE-J2602) interface or bidirectional PWM interface
- 16 bit RISC CPU 32k Flash 16k SysROM 4k SRAM
- 4x 16 bit PWM generation (edge/center aligned)
- $T_{j\text{max}}$ peak = +150°C

Applications
- LIN2.x or LIN1.3 relay nodes

Package
- QFN48L7

Application Diagram

Free Programmable LIN2.x Relay Node for 2-4 relays | E523.30/31/34/37

Key Features
- Controls 4 high side driven relays or 2 low side driven relays or 3 bistable relays
- Programmable holding current for low-side up to 800mA
- 5.5V to 20V supply voltage (load dump 42V)
- Embedded 8bit µC 256 Byte RAM, 8k Flash + 4k SysROM, 64 Byte EEPROM
- LIN2.x(1.3), SAE-J2602 or PWM Interface, LIN Auto-Addressing
- $T_{j\text{max}}$ peak = +170°C

Applications
- LIN2.x or LIN1.3 relay nodes

Package
- QFN32L6

Application Diagram
