2 CHANNEL SWITCHED MODE CONSTANT CURRENT CONTROLLER

Features
- Dual switched-mode, PWM LED controller
- 5V to 55V input voltage range, up to 80V boosted output voltage
- Boost-, SEPIC, Buck-Boost- or Buck Topology supported
- Constant Current Regulation implemented
- High-Precision Differential High-Side Sense up to 60V
- High-Frequency PWM Dimming Capability for constant LED Color
- Analog 10:1 Dimming Capability for LED Binning
- Integrated Softstart
- Advanced Error Detection (e.g. Over-Voltage, Open-Load Detection, different Shorts or GND Loss)
- Integrated Automotive LDOS for 5V & 3.3V
- AEC-Q100 Qualified
- Junction temperature range -40°C to +150°C

Applications
- Automotive LED lighting Applications (daytime running light, indicator, front- and rear light, interior lighting etc.)
- General Indoor and Outdoor Lighting and -Signals
- TFT Backlighting
- General Current driven Applications

General Description

E522.32 and E522.34 are part of a family of fixed frequency switched-mode high voltage LED power supplies and controllers with high efficiency. Integrated high-side sensing allows topologies related to the supply input (Boost-to-Battery) or to GND (Boost-to-GND).

The devices are suitable for operation in boost-, buck-boost-, SEPIC- and buck-topologies, particularly in harsh automotive environments.

The constant switching frequency is adjustable up to 600kHz by an external resistor or can be synchronized in Master-Slave configurations with other devices. The phase shift of 180° between channels essentially reduces EMI.

Multiple control- and monitoring functions, e.g. short- and open load detection, over-temperature shutdown and under-voltage lockout are implemented.
